Thermo
SCIENTIFIC

In 2010, the European Committee on Antimicrobial Susceptibility Testing (EUCAST) launched a standardized disk diffusion method calibrated to EUCAST MIC breakpoints harmonized across Europe.

Since then, CRG (the Netherlands), DIN (Germany), NWGA (Norway), SRGA (Sweden) and CA-SFM (France) have encouraged the use of this standardized method regionally, and EUCAST's efforts to standardize across Europe is almost complete, with BSAC (UK) adopting the method by January 2015.¹

To help ensure a seamless transition for laboratories that adopt the EUCAST methodology, Thermo Fisher Scientific offers the complete range of EUCAST-recommended AST Disks, as well as all the accessories required for AST.

¹ Brown DF, Wootton M and Howe RA. (2015) Antimicrobial susceptibility testing breakpoints and methods for BSAC to EUCAST. *J Antimicrob Chemother.* doi:10.1093/jac/dkv287

Background

EUCAST was formed in 1997 with the aim of achieving a European consensus on susceptibility testing to enable comparability of data and resistance surveillance within the international community.

The development of the EUCAST disk diffusion method was a natural progression of the MIC harmonization, with the following as key stages in the development strategy:

- Close consultation with national breakpoint committees to ensure acceptance of the proposed harmonization
- Subsequent agreement to adopt harmonized, Europe-wide breakpoints, with the disk diffusion test being selected as the most appropriate way to ensure that the European MIC-breakpoints are implemented in European laboratories
- The recognition, by all committees of 'species-specific breakpoints'

Antimicrobial Susceptibility Test Disks

Disk diffusion remains one of the simplest and most widely used methods for susceptibility testing. It is an extremely flexible technique, with a wide variety of antibiotics and concentrations available, which can easily be changed as required. The disk diffusion test not only categorizes resistant, intermediate and sensitive organisms through quantitative results, but also provides a visual indication of the following:

- Inoculum level
- Presence of contamination
- Resistant mutants
- Beta-lactamase activity
- Antagonism and synergy between antibiotics

Thermo Scientific™ Oxoid™ Antimicrobial Susceptibility Test Disks are manufactured under the quality systems BS EN ISO 9001:2008 and ISO 1345:2003. Each cartridge is individually sealed with a desiccant to maintain a moisture level of <2% ensuring the long-term stability of the product. All the antimicrobials recommended by the EUCAST can be found in the standard Oxoid AST Disk range:

Antimicrobial	Symbol	Concentration	Product Code
Amikacin	AK	30	CT0107B
Amoxicillin	AML	10	CT0161B
Amoxicillin/Clavulanic acid	AMC	3	CT0538B
Amoxicillin/Clavulanic acid	AMC	30	CT0223B
Ampicillin	AMP	10	CT0003B
Ampicillin	AMP	2	CT0002B
Ampicillin sulbactam	SAM	20	CT0520B
Aztreonam	ATM	30	CT0264B
Cefaclor	CEC	30	CT0149B
Cefadroxil	CFR	30	CT0453B
Cefepime	FEP	30	CT0771B
Cefixime	CFM	5	CT0653B
Cefotaxime	CTX	5	CT0407B
Cefoxitin	FOX	30	CT0119B
Cefpodoxime	CPD	10	CT1612B
Ceftaroline	CPT	5	CT1942B
Ceftazidime	CAZ	10	CT1629B
Ceftibuten	CFT	30	CT1662B
Ceftriaxone	CRO	30	CT0417B
Cefuroxime	CXM	30	CT0127B
Cephalexin Chloramphenicol	CL	30	CT0007B
	C	30	CT0013B
Ciprofloxacin	CIP	5	CT0425B
Clindamycin	DA	2	CT0064B
Doripenem	DOR	10	CT1880B
Doxycycline	DO	30	CT0018B

Proven performance according to EUCAST study

Evaluation of selected Thermo Scientific Oxoid AST Disks by EUCAST Development Laboratory (EDL), Växjö, Sweden, 2014.

Sixteen disks with nominal potencies, as recommended by EUCAST, were selected for evaluation against published quality control (QC) ranges and targets for relevant strains. Disk diffusion was performed as recommended by EUCAST. Each disk type was tested against all QC strains with targets and ranges in the EUCAST QC tables v. 4.0. Mueller-Hinton agar from two manufacturers was used.

Mean values from triplicate tests of each disk type were evaluated against QC targets and ranges and were categorized as green if the mean value was within ± 1 mm of the target value, yellow if the mean value was >1 mm but within ± 2 mm of the target value, orange if the mean value was >2 mm from the target value but still within the QC range and red if the mean value was out of the QC range (see table to the right). For disks with mean values >1 mm from the QC target, it is also shown whether the results were above (high) or below (low) the target value.

Summary of evaluation of selected disks vs. EUCAST QC targets and ranges

For each disk, the mean value from three tests was compared with the EUCAST target. This table shows the combined results for all strains tested for each agent.

These results (and data from other disk manufacturers) were presented as a poster at ECCMID 2015 with manufacturers names made anonymous.

Antimicrobial Agent	Disk Content	Range	Oxoid Disk Performance Results
Benzylpenicillin	1 unit	EUCAST	
Amoxicillin-clavulanic acid	20-30	EUCAST/CLSI	
Piperacillin-tazobactam	30-Jun	EUCAST	
Oxacillin	1	EUCAST	
Mecillinam	10	EUCAST/CLSI	
Cefotaxime	5	EUCAST	
Cefoxitin	30	EUCAST	
Ceftazidime	10	EUCAST	
Meropenem	10	EUCAST/CLSI	H
Ciprofloxacin	5	EUCAST/CLSI	
Norfloxacin	10	EUCAST/CLSI	
Pefloxacin	5	EUCAST	
Gentamicin	10	EUCAST/CLSI	
Tobramycin	10	EUCAST/CLSI	
Erythromycin	15	EUCAST	
Tetracycline	30	EUCAST	

- Mean value within ± 1 mm of the target value
 - Mean value > 1 mm but within ± 2 mm of the target value
 - Mean value > 2 mm from the target value but within the QC range
 - Mean value of the QC range
- H = High, mean value > 1 mm above target

Vancomycin	VA	5	CT0188B

Note: Ceftobiprole AST disk currently not available in the range and EUCAST breakpoints are currently in preparation.

From culture media to quality control, we offer a complete range of Thermo Scientific products to complete your AST workflow while meeting the EUCAST standardized methodology.

Quality Control

Thermo Scientific™ Culti-Loops™ Quality Control Organisms enable the quick, easy and safe preparation of standardized cultures for quality control testing. They are ready to use, disposable bacteriological loops containing stabilized viable microorganisms. Each loop is individually packaged in a foil pouch and each pack contains five loops.

Culti-Loops are recommended for use in the performance testing of culture media, stains, diagnostic kits and reagents; for the maintenance of stock cultures; and in the evaluation of bacteriological procedures.

Thermo Scientific Culti-Loops

Dehydrated Culture Media and Prepared Media

Thermo Scientific™ Oxoid™ Dehydrated Culture Media and Prepared Media are manufactured under controlled conditions in BS EN ISO 9001:2008 and ISO 13485:2003 -registered production facilities. All products are tested in accordance with the Clinical Laboratory Standards Institute (CLSI) M6-A2 and with a range of antimicrobial disks and strips against microorganisms to ensure that the correct zone sizes are produced on every batch.

Thermo Scientific Oxoid Dehydrated Culture Media

Product	Pack Size	Code

Accessories

A range of dispensers are available to ensure the accurate placement of the disks onto a variety of sizes of agar plates including 90mm, 120mm and 140mm diameters, with a simple one-handed operation. The dispensers are height adjustable to allow them to be tailored to individual laboratory requirements, and can be stored in a fully interlocking container to prevent the ingress of moisture, thus helping to maintain the viability of the antibiotics in storage. A desiccant is contained in the base of the container, which again ensures the opened cartridges are stored in a moisture-free environment.

A Thermo Scientific™ Oxoid™ Turbidometer™, for the accurate preparation of a 0.5 McFarland inoculum, is also available, aiding standardization and contributing to reproducible, reliable results. The Turbidometer is simple to use, giving a clear indication of the density of the inoculum.

Accessories

Product	Plate diameter	Code
6 place disk dispenser	90 mm	ST6090
8 place disk dispenser	90 mm	ST6080
12 place disk dispenser	140 mm	ST1215
16 place disk dispenser	120 mm	FR600510
Turbidometer	N/A	AU0107A
